

**Claims:**

1. A bridge overhang bracket, comprising:
  - a) an elongate top member having inner and outer ends;
  - b) an elongate diagonal member having an inner end and an  
5 outer end, the outer end of the diagonal member pivotally attached to the  
outer end of the top member;
  - c) upper and lower pivot joints secured to the top member and  
diagonal member, respectively, adjacent the respective inner ends thereof;
  - d) an elongate side member extending between and engaged  
10 with the upper and lower pivot joints;  
wherein at least one of the pivot joints comprises an adjustable  
axial engagement mechanism for adjusting the position along the length of the  
side member at which the at least one pivot joint engages the side member.
2. The bracket according to claim 1 wherein the adjustable pivot  
15 connector comprises a pivot pin pivotally mounted in one of the top or  
diagonal members.
3. The bracket according to claim 2 wherein the pivot pin has a cross  
aperture for receiving the side member in sliding fit.
4. The bracket according to claim 3 wherein the side member comprises  
20 a threaded rod, and the adjustable axial engagement mechanism comprises a  
nut threaded onto the side member.
